TD/TP 1
Introduction

Task 1: Read the slide provided (titled "CH1 and Quiz") and do the quiz.
Task 2: Do the exercises at the end of Chapter 1 on page 10 in the reference book. You can see the questions as follow:

1. Use software to produce the time series plot shown in Exhibit 1.2, on page 2. The data are in the file named `larain`.

2. Produce the time series plot displayed in Exhibit 1.3, on page 3. The data file is named `color`.

3. Simulate a completely random process of length 48 with independent, normal values. Plot the time series plot. Does it look "random"? Repeat this exercise several times with a new simulation each time.

4. Simulate a completely random process of length 48 with independent, chi-square distributed values, each with 2 degrees of freedom. Display the time series plot. Does it look "random" and nonnormal? Repeat this exercise several times with a new simulation each time.

5. Simulate a completely random process of length 48 with independent, t-distributed values each with 5 degrees of freedom. Construct the time series plot. Does it look "random" and nonnormal? Repeat this exercise several times with a new simulation each time.

6. Construct a time series plot with monthly plotting symbols for the Dubuque temperature series as in Exhibit 1.9, on page 7. The data are in the file named `tempdub`.

Task 3: Do the take home assignment (file titled "CH1 Take Home Assignment").
